

CHEIRAP (■■■■■) — Simple Speaking Script for the Jury

National Innovation Challenge on AI & Digital Governance – Manipur (2026) | Host: DIT Manipur & MTIF

Core Goal: Stopping Fake Construction & Tender Scams	Style: 100% Plain Everyday English (No confusing jargon)	Total Time: 6 Minutes (Strict)
Submitted By: Team Lotux	System Shown: CHEIRAP Live Working Prototype	Structure: 4m Pitch + 2m Q&A;

SPEAKING TIP FOR THE 4-MINUTE CLOCK: Speak calmly like you are explaining a big discovery to a smart friend. Avoid tongue-twisters. Use simple phrases: 'rushed deadlines' instead of 'window squeeze', 'last-minute rule changes' instead of 'corrigendum churn', and 'photo fingerprint' instead of 'perceptual hash'.

MINUTE 1: The Real Problem & Why Audits Are Too Late (0:00 – 1:00)

[WHAT TO DO ON STAGE & SCREEN — 0:00 – 1:00]: Stand comfortably, look straight at the judges, smile. Show the CHEIRAP main overview screen on the projector.

"Good morning, respected judges. I am representing **Team Lotux**.

Every year, the Government of Manipur spends hundreds of crores building schools, roads, bridges, and hospitals. The problem is that public money gets leaked in two connected stages:

First, in the bidding room: corrupt groups secretly fix the tenders before contracts are even awarded, so only their preferred company wins.

Second, out on the construction ground: the same contractors ask for payment by submitting fake or recycled photos of buildings from other towns.

Today, the government only catches this two to three years later during an audit. But by then, the money is already gone. We asked: Why wait for an autopsy? That is why we built **CHEIRAP**—to protect public money in real time, from the first tender to the finished building."

Time: 60s | Words: ~135 | Pace: Easy conversational speech

MINUTE 2: Stage 1 — Stopping Rigged Tenders in Real Time (1:00 – 2:00)

[WHAT TO DO ON STAGE & SCREEN — 1:00 – 2:00]: Click on the 'Tender Surveillance' screen. Show the 4 simple cards on screen.

"Let us start with the bidding room. CHEIRAP watches government tender portals 24/7 while bidding is still open.

It automatically catches the four most common tricks used to rig tenders:

- 1. Rushed Deadlines:** Giving outside bidders only 4 or 5 days to apply instead of the legal 3 weeks, so nobody else has time to submit a bid.
- 2. Last-Minute Rule Changes:** Quietly changing the rules 24 hours before closing to favor one bidder, without giving everyone extra time.
- 3. Unfair Deposit Fees:** Demanding huge upfront cash deposits just to kick out smaller local businesses.
- 4. Fixed Bidding:** Spotting groups of bidders submitting almost identical bids from the same office.

When CHEIRAP spots these tricks, it creates an official hold notice before the contract is awarded. It stops the scam before a single rupee leaves the government."

Time: 60s | Words: ~145 | Pace: Easy conversational speech

MINUTE 3: Stage 2 — Checking Real Construction (PWD-04) (2:00 – 3:00)

[WHAT TO DO ON STAGE & SCREEN — 2:00 – 3:00]: Switch to 'Works Assurance'. Open Case A on screen (the red warning), then quickly show Case B (the green clearance).

"Now, what happens once construction starts? This directly solves **Problem PWD-04: AI Construction Progress Monitoring**.

When contractors upload photos to claim their money, basic AI just looks for bricks or walls. But corrupt contractors do not upload photos of random objects; they take a real photo of an older school built two years ago in another town and submit it again!

CHEIRAP catches this using four simple checks:

- Digital Photo Fingerprint:** It scans the photo and checks it against 11,000 past government projects.
[Point to screen] Look at **Case A**. The contractor claimed this photo was a new school in Lamphelpat. But CHEIRAP caught that it was a **93% duplicate match** to an old classroom in Bishnupur! Bills were frozen immediately.
- GPS Location Check:** In Case A, the camera was actually **9 kilometers away** from the real site.
- Speed Limits:** Concrete needs time to dry. A building cannot jump from 15% to 100% in 12 days during heavy monsoon rain.
- Payment Check:** It makes sure bills match the physical measurements written in the engineer's notebook.

In **Case B**, Churachandpur College shows genuine step-by-step progress with 100% original photos, so it gets approved automatically."

Time: 60s | Words: ~160 | Pace: Easy conversational speech

MINUTE 4: Why Our Idea Wins & The Final Punchline (3:00 – 4:00)

[WHAT TO DO ON STAGE & SCREEN — 3:00 – 4:00]: Turn to look directly at the judges. Show the official notice and the digital certificate on screen.

"Why is CHEIRAP different from any other project? Three clear reasons:

- It is Fair and Human:** CHEIRAP is not a cold robot that blindly bans people. When it finds a problem, it automatically creates an official 7-day inspection notice, giving a human engineer time to visit the site and verify in person.
- Court-Ready Proof:** Every photo, location check, and report gets a tamper-proof digital stamp under **Section 65B of the Bharatiya Sakshya Adhiniyam**. If a contractor takes the government to court, this evidence is legally accepted.
- Works with Existing Portals:** The government does not need to buy new computers or change how officers work. It connects right into the existing state portals.

To wrap up: Protecting public money should never be an autopsy done years after the money is gone. With CHEIRAP, the government gets an honest, 24/7 guardian from the first tender to the finished building. Thank you. We are ready for your questions."

Time: 60s | Words: ~150 | Pace: Easy conversational speech

EVALUATION TIMELINE & BUZZER CHEATSHEET:

- 0:00 – 1:00:** Hook the judges with the two-stage problem (tender scam + fake photos) and why audits are too late.
- 1:00 – 2:00:** Stage 1: How CHEIRAP catches rushed deadlines and last-minute changes before contracts are signed.
- 2:00 – 3:00:** Stage 2 (PWD-04): Show Case A (recycled photo in Bishnupur) vs Case B (genuine college progress).
- 3:00 – 3:50:** Three reasons why CHEIRAP wins (Fair notice, Court-ready proof, No new hardware) + Punchline.
- 3:50 – 4:00:** Stop speaking before the 4-minute bell and welcome jury questions.

The 2-Minute Q&A; Session: Simple Defense Answers

Short, confident answers using simple words to convince technical, government, and industry judges.

TECHNICAL QUESTION: FAKING PHOTO LOCATION

Judge Might Ask: "What if a contractor fakes the GPS location written on the photo?"

Your Simple 20-Second Answer: "They can try to edit the GPS numbers, but they cannot change the actual scene in the photo. That is why CHEIRAP checks both. Even if they type in the correct location, our digital photo fingerprint catches that the building belongs to an older project from two years ago. You cannot fake the pixels."

FIELD REALITY: REMOTE AREAS WITH NO INTERNET

Judge Might Ask: "How does this work in remote hill areas where there is no mobile network or internet?"

Your Simple 20-Second Answer: "Field officers use their regular phone camera without any internet. The phone's GPS satellites still record the exact location and time into the photo file offline. The moment they return to the office or get Wi-Fi, the photos upload and CHEIRAP verifies them in seconds. Work never stops because of bad network."

GOVERNMENT QUESTION: STOPPING TENDERS LEGALLY

Judge Might Ask: "Can an AI really pause or stop a government tender?"

Your Simple 20-Second Answer: "CHEIRAP does not replace the officer; it gives them an early warning. Under government rules, a tender with a rushed deadline or secret changes is against the law. CHEIRAP flags it immediately and prepares an official recommendation. The senior commissioner simply clicks to approve, pausing the bid before money is lost."

INDUSTRY QUESTION: WHY NOT A STANDARD AI CHATBOT?

Judge Might Ask: "Why didn't you just use an AI like ChatGPT to look at the pictures?"

Your Simple 20-Second Answer: "Chatbots can guess and make things up. In government audits and courts, you cannot say 'the AI thought it looked 60% complete.' CHEIRAP uses exact math, engineering speed limits, and digital stamps that cannot be faked. It gives reliable facts that stand up in court."

REGISTRATION REMINDER FOR TOMORROW (9 OCT 2026): Registration begins at **9:00 AM** sharp. Arrive early, test the projector connection, verify that the prototype runs smoothly offline on localhost:5173, and keep this script with you. You have a full, working system—present it with confidence!
