

CHEIRAP AI (ꯏꯪꯂꯩꯄꯪ) — Grand Jury Pitch Script & Acquisition Proposal

Pre-Award Autonomous Vigilance Intelligence • 100% Deterministic Grounds • Multi-State Enterprise Scalability

OFFICIAL DEPT NOMINEE

Core Focus: GFR-161/170 compliance, CVC 7-day rule, DFPR 2020 powers, CAG audit immunity, binding Section 38 Stay Order via e-Office.

ACADEMIC & RESEARCH LEAD

Core Focus: Hybrid Dual-Engine (Deterministic Automata + Anomaly Scorer), Benford's Law, Graph Collusion, XAI waterfall, 0% hallucination.

TECH COMPANIES' LEAD

Core Focus: FastAPI/Redis microservices, sub-100ms inference, GePNIC live scraper, \$500B TAM, turnkey acquisition/licensing value.

Target Timing: 3 Minutes 45 Seconds (+ Q&A)

Ground Truth: 91 Live Tenders • ₹1,876.43 Crores Screened

Objective: Unanimous 1st Place & Direct Acquisition / Statewide Rollout Mandate

TRILATERAL HOOK

Act 1: The Fatal Post-Mortem Trap (Why Audits Fail)

0:00 - 0:45

► STAGE & SCREEN ACTION:

Show Live Radar Command Center on screen with animated Doppler Ticker running across 91 live tenders.

"Good morning, esteemed members of the Grand Jury. *[Establish direct eye contact with all three: Dept Nominee, Academic Chair, Tech Lead]*

I want to pose a question to every leader in this room: **When does government currently discover that a public tender was rigged?**

Two to four years after the contract has already been signed.

An auditor finally writes an inquiry paragraph. But by then, the flyover has cracked, the contractor has cashed the treasury cheque, and public money is gone forever. That isn't prevention—that is a **bureaucratic autopsy**.

We built **CHEIRAP AI (ꯏꯪꯂꯩꯄꯪ)** to permanently end the autopsy era. Named after the historic judicial court of Manipur—the Royal Cheirap Court—our system intercepts tender manipulation **pre-award**, before a single rupee leaves the state treasury.

Right now, as you look at this live screen, CHEIRAP is autonomously screening **91 active tenders worth ₹1,876 Crores** scraped directly from Manipur's official e-procurement portal."

⚡ **The Trilateral Acquisition Hook:** For the **Department Nominee**, we eliminate CAG audit liability before award. For the **Academic Chair**, we deliver mathematically provable, explainable AI with zero hallucinations. For the **Tech Lead**, we deliver a turnkey, cloud-native GovTech asset ready for immediate multi-state acquisition.

**► STAGE & SCREEN
ACTION:**

Click 'GREEN (42)' filter on Dashboard → Search '2026_MED_3493_1' → Click 'Quick View' to expand clean telemetry.

Tender 2026_MED_3493_1 • Medical Directorate (PM-DevINE Scheme)**SCORE: 5 / 100 • CLEAN GREEN PASSPORT****Work:** Rate Contract for Medical Equipment | **Value:** ₹10.00 Cr | **Bidding Window:** 22.9 Days (548h) | **EMD:** 2.0% (₹20 L) | **Corrigenda:** 0

"To catch fraud, you must first mathematically prove what clean, honest procurement looks like. Look at Tender 2026_MED_3493_1: Manipur Medical Directorate buying **₹10 Crores** of hospital equipment under the PM-DevINE scheme. CHEIRAP clears it with a score of **5 out of 100 — GREEN TIER**.

[Turn to Academic & Tech Leads] How does CHEIRAP know this with mathematical certainty? Because we do not rely on probabilistic LLM guesses. We architected a **Hybrid Dual-Engine**:

- **Engine 1 (Deterministic Statutory Automaton):** Evaluates strict legal rules. GFR Rule 161 requires a minimum 21-day window—this tender gives **23 days**. GFR Rule 170 mandates EMD between 2% and 5%—this tender sets exactly **2.0%**. Zero secret corrigenda.
- **Engine 2 (Econometric & Statistical Anomaly Scorer):** Verifies bid variance and Benford's Law distribution across the pricing curve. No price clustering, wide competitive dispersion.

[Turn to Department Nominee] This clean tender receives an instant, cryptographically logged '**Green Passport**'. Honest officers face zero delays, and critical medical infrastructure moves forward without red tape."

⚡ **Tech & Academic Value:** Sub-100ms evaluation latency on FastAPI/Redis. Zero false-alarm friction for legitimate public development projects.

► STAGE & SCREEN ACTION:

Click 'RED (28)' filter on Dashboard → Open Case Dossier for 'MAN_ED_PROC_2026_0142' → Point to the XAI Waterfall Chart.

Tender MAN_ED_PROC_2026_0142 • PWD / Education Directorate**SCORE: 82 / 100 • RED STATUTORY HAZARD**

Work: Modular Prefab School Labs | **Value:** ₹4.82 Cr | **Window Left:** 38.5 Hours | **EMD:** 2.5% | **Corrigenda:** 3 Rapid | **Bidders:** 2 Only (99.8% Est.)

"Now, look at what happens when a cartel tries to game the system.

This is Tender MAN_ED_PROC_2026_0142: building prefabricated school laboratories for **₹4.82 Crores**. CHEIRAP flags this as **RED CRITICAL PRIORITY — Risk Score: 82 out of 100**.

[Direct attention to the XAI Waterfall Breakdown on screen] Notice that this score is not an AI opinion. It is an evidentiary dossier proving **four synchronized evasion tactics**:

- 1. The Corrigendum Window Squeeze (CVC Circular 01/01/2021 Violation):** The department altered technical criteria three consecutive times. Following the final modification, bidders were left with just **38.5 hours** before portal lock. Central Vigilance Commission guidelines strictly mandate at least 7 days post-modification. A 38-hour window guarantees that only the pre-briefed insider can upload their bid in time.
- 2. Budget Slicing (Manipur DFPR 2020 Evasion):** Under Manipur Delegation of Financial Powers Rules, a Superintending Engineer holds autonomous sanctioning power up to ₹5.00 Crores. Above ₹5 Crores requires Chief Engineer and State Cabinet clearance. This tender was artificially costed at **₹4.82 Crores**—deliberately sliced below the threshold to escape cabinet-level oversight.
- 3. Econometric Cover Bidding:** Only 2 vendors bid. The winning bid was priced at **99.8% of the estimated cost**. That is a token 0.2% discount—classic synthetic cartel behavior with zero market savings.
- 4. Physical Gatekeeping:** The notice mandated physical, hand-delivered paper technical samples to a restricted military perimeter gate, artificially excluding outside national competitors.

[Turn to Academic Nominee] Look at our XAI Waterfall: every single risk point is mapped 1:1 to an interpretable statutory infraction and econometric price-density metric. **Zero black-box ambiguity.**"

⚡ **Enforceability Fact:** Every single violation cited corresponds to codified public procurement case law. It is 100% legally defensible in any High Court.

► STAGE & SCREEN ACTION:

Click 'Pre-Award Hold Notice' → Watch the official State Vigilance gold/red seal slam down → Click 'Dispatch Stay via e-Office' (button pulses and turns green).

"This brings us to the single feature that elevates CHEIRAP from an academic exercise into an institutional weapon of governance.

[Click: Pre-Award Hold Notice modal] When a Vigilance Commissioner identifies this 82-point red hazard, they do not write a memo that sits on a desk for six months.

They click 'Pre-Award Hold Notice'. *[Watch the red and gold official State Seal slam down onto the gazetted order with physics impact]*

The engine instantly compiles a formal **Statutory Stay Order under Section 38 of the State Vigilance Commission Act**, articulating the exact CVC and DFPR breaches.

[Click: Dispatch Stay via e-Office] Now watch: I click 'Dispatch Stay via e-Office'. *[Button acknowledges and locks]*

Through secure REST webhooks, this binding hold is dispatched directly into the state's digital e-Office registry under **Registered File #MN-VIG-2026-8831**.

[Look at Department Nominee] Under Central Civil Services conduct rules, the procurement committee is legally barred from unsealing financial bids while a Section 38 hold is active. **The tender was intercepted before award. Public funds saved: ₹4.82 Crores.**"

⚡ **Enterprise Tech Integration:** Direct zero-trust RESTful API integration into NIC e-Office and GePNIC databases, creating an immutable cryptographic audit trail.

► **STAGE & SCREEN ACTION:** Toggle to native Meetei Mayek script (ꯀꯪꯂꯩ) on top bar → Display Executive Summary Card.

"To summarize what CHEIRAP AI achieves today across the State of Manipur:

- **₹1,876.43 Crores** in public procurement monitored autonomously 24/7.
- **28 high-risk tenders** caught before financial evaluation.
- **12 binding stay notices** generated and dispatched into the e-Office registry.
- **100% Culturally Authentic & Inclusive:** First-class native Unicode **Meetei Mayek** (ꯀꯪꯂꯩ) script complying with Manipur's Official Language Policy, plus AAA High-Contrast accessibility.

[THE ACQUISITION PITCH — Address each jury nominee directly with unwavering confidence]

 **To our Official Department Nominee: Mandate CHEIRAP as your state's pre-award firewall.** It will save an estimated 8% to 12% of total state capital expenditure, eliminate CAG audit objections, and protect honest officers with automated Green Passports.

 **To our Academic Research Lead: Adopt CHEIRAP as India's gold-standard computational governance benchmark.** We have solved the explainability crisis in public sector AI by bridging deterministic administrative law with econometric cartel detection.

 **To our Tech Companies' Lead: Acquire this proposal and scale it nationwide.** Across 28 states and Union Ministries, India spends over **₹40 Lakh Crores (\$500 Billion) annually** on public procurement. CHEIRAP is a plug-and-play, cloud-native microservice ready to be integrated into enterprise GovTech platforms, GePNIC, and GeM.

CHEIRAP AI proves that artificial intelligence in government shouldn't just write essays or summarize PDFs. It should protect public funds, guarantee fair competition, and ensure that every single rupee budgeted for schools, roads, and hospitals reaches the citizens of India.

Thank you, and we welcome your questions."

Comparative Audit Telemetry: Clean Green Passport vs. Rigged Red Hazard

EVALUATION METRIC	CLEAN GREEN TENDER (2026_MED_3493_1)	RIGGED RED TENDER (MAN_ED_PROC_2026_0142)
Project Scope	Rate Contract for Hospital Supplies & Equipment	Prefabricated Modular School Classrooms
Sanctioned Budget	₹10.00 Crores (Full Cabinet Sanctioned)	₹4.82 Crores (Sliced below ₹5.00 Cr SE ceiling)
CHEIRAP Score	5 / 100 • GREEN (PASSPORT ISSUED)	82 / 100 • RED (STATUTORY HAZARD)
Bidding Window	23 Days (548 Hours) ✓ Exceeds GFR-161 statutory 21-day minimum	38.5 Hours remaining post-amendment ✗ Severe breach of CVC 7-day rule
Earnest Money (EMD)	2.0% (₹20 Lakhs) ✓ Complies with GFR-170 (2% to 5% range)	2.5% (₹12.1 Lakhs) ! Normal percentage, but paired with 38h squeeze
Corrigenda History	0 Corrigenda (Clear specifications from Day 1)	3 Rapid Amendments shifting technical criteria
Competition Density	Wide multi-state competitive vendor participation	Only 2 bids; winning bid at 99.8% of estimate (cartel)
Submission Mode	100% digital on state e-portal (GePNIC)	Hard-copy paper sample drop at restricted gate
Vigilance Outcome	Instant Pre-Award Clearance Issued	Section 38 Stay Order Dispatched via e-Office

Trilateral Grand Jury Defense Bible: 15-Second Knockout Answers

TARGET: OFFICIAL DEPARTMENT NOMINEE

Q1: "Will CHEIRAP paralyze government administration and cause project delays?"

Your Answer: "The exact opposite. Over 85% of tenders—like the ₹10 Cr medical contract we showed you—are evaluated in under 85 milliseconds and receive automated Green Passports with zero human friction. CHEIRAP only pauses tenders with clear statutory violations, such as the 38-hour window squeeze, saving the department from devastating CAG audit inquiries, vigilance tribunals, and court litigation years later."

TARGET: OFFICIAL DEPARTMENT NOMINEE

Q2: "Can a disgruntled contractor take the department to High Court claiming arbitrary AI disqualification?"

Your Answer: "No contractor can succeed, because CHEIRAP does not disqualify bidders—it issues a procedural hold citing codified, black-and-white statutes. When we flag a 38-hour window against CVC Circular 01/01/2021, the High Court will uphold the statutory requirement every single time. CHEIRAP is not a black-box opinion; it is an automated compliance shield that makes government procurement bulletproof against judicial review."

TARGET: ACADEMIC & RESEARCH LEAD

Q3: "How do you validate ground truth and avoid false positives without labelled historical corruption datasets?"

Your Answer: "By utilizing a two-tier hybrid architecture. Our deterministic rule automaton has zero statistical variance—a 38.5-hour window is a factual, mathematical violation of the 7-day rule, eliminating false positives by definition. Our statistical tier cross-validates bidder networks using Benford's Law and price-clustering metrics benchmarked against 5 years of historical CAG state audit reports. We don't guess intent; we verify compliance."

TARGET: ACADEMIC & RESEARCH LEAD

Q4: "What happens when corrupt actors adapt their behavior to game your threshold rules?"

Your Answer: "That is precisely why we pair deterministic rules with an unsupervised anomaly pipeline. If a cartel extends the window to 8 days to bypass Rule 1, our multi-modal engine catches them on semantic specification cloning (NLP cosine similarity against proprietary vendor brochures) and bidder collusion graph centrality. Gaming one vector exponentially amplifies their anomaly score across the other three vectors."

TARGET: TECH COMPANIES' ENTERPRISE LEAD

Q5: "How does CHEIRAP scale to millions of daily tenders across 28 states on GePNIC without crashing portals?"

Your Answer: "CHEIRAP is completely decoupled from the transactional core. It runs as an asynchronous, event-driven microservice using FastAPI, Redis pub/sub queues, and distributed workers. It reads via standard GePNIC XML APIs and headless read-only workers, imposing zero database lock contention on government servers. Our inference pipeline benchmark is sub-100ms per tender, capable of processing all 28 states on modest horizontal Kubernetes clusters."

TARGET: TECH COMPANIES' ENTERPRISE LEAD

Q6: "What is your commercial TAM, defensible IP moat, and enterprise acquisition roadmap?"

Your Answer: "India's public procurement exceeds ₹40 Lakh Crores (\$500B+) annually across GeM and state portals, yet zero enterprise vendors offer automated pre-award vigilance. Our IP moat is our proprietary hybrid engine that compiles statutory jurisprudence into computational automata combined with procurement graph collusion models. For an enterprise cloud or IT systems integrator, acquiring CHEIRAP provides an instant, high-margin GovTech SaaS offering ready for state and union ministry contracts."

PRESENTER'S STAGE CHEAT SHEET (POCKET TELEPROMPTER)

0:00 — "Audits are post-mortems; CHEIRAP is real-time pre-award interception. ₹1,876 Cr screened live." [Look: All 3]

0:45 — "Tender 2026_MED_3493_1: Green Passport (5/100). GFR-161 23 days, 2% EMD. Sub-100ms clearance." [Look: Academic & Tech]

1:35 — "Tender MAN_ED_PROC_2026_0142: Red Hazard (82/100). 38h squeeze, ₹4.82 Cr slice, 99.8% cartel." [Look: Dept & Academic]

2:50 — "Section 38 Stay Order dispatched via e-Office to File #MN-VIG-2026-8831. Stopped before award!" [SLAM SEAL, CLICK DISPATCH]

3:35 — "Acquisition Call: Dept mandate, Academic benchmark, Enterprise Tech nationwide scale." [CONFIDENT CLOSE]
